

# Terrafix®

Interlocking Concrete Block System

**EROSION CONTROL SYSTEMS**

A division of Apex Masonry

**Terrafix interlocking concrete block system has been improving Queensland's highway development and waterway infrastructure with cost-effective erosion control and soil stabilization for bridges and sloped landscapes.**

Terrafix is a durable & versatile system that provides a fully integrated articulating armour of precast concrete units designed to accommodate a wide range of climatic, loading and soil conditions. At the heart of the system is a unique interlock – engineered to allow the armour to fully conform to changing sub-grade profiles. The interlock enables the systems to resist severe hydraulic uplifting forces and redistribute imposed traffic loads.

#### Suitable For:

Bridge Abutment protection

Slope stabilisation

Channel protection

Shoreline protection

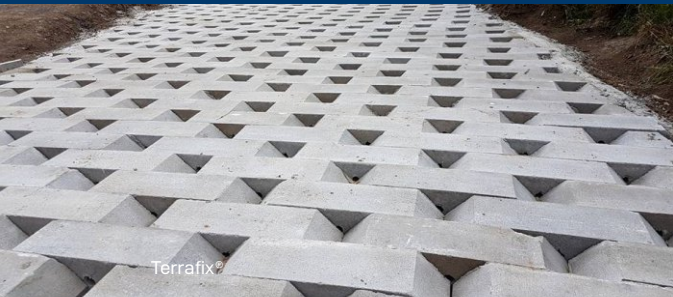

Paving & slope stabilisation

#### FEATURES

- > **Fully interlocking, flexible (unlike stone pitching)**
- > Approx. 10% open for pour pressure relief
- > Can be reused if civil design changes
- > Only combines 3 main components
- > Designed to withstand severe hydraulic & mechanical stresses - hence provide a durable, stable, protective armouring.
